---

Kuehne + Nagel and easyJet signed an agreement for the logistics support to refurbish and modify 39 aircraft, executed at five MRO locations.

Using KN InteriorChain, easyJet aims at keeping the planned downtime for refurbishment to a minimum while benefitting from an integrated supply chain solution.

Elentinus Margeirsson, Head of Supply Chain Engineering and Technical Contracts at easyJet: "We have successfully worked with Kuehne + Nagel on our previous fleet upgrade. For our next 39 aircraft the complexity increases as we will work in four European locations. The KN InteriorChain solution is crucial to meet the downtime requirements and have end-to-end visibility. Kuehne + Nagel understands these challenges."

"The release of KN InteriorChain as end-to-end digitised solution was confirmed by the market and we are proud that easyJet decided to continue our partnership relying on this solution.

Addressing the increasing frequency for interior refurbishments, KN InteriorChain offers manufacturers, maintenance & repair organisations, airlines and leasing companies a unique solution to address the complex customer requirements in this industry", said Erik Goedhart, Senior Vice President Aerospace at Kuehne + Nagel.

The modular solution KN InteriorChain includes supplier order management, multimodal transportation and warehousing as well as value-added services such as kitting, packaging, rework and disposal.

To ensure cabin material, which is crucial for passenger comfort, is both handled appropriately and in line with the respective requirements, Kuehne + Nagel's processes are certified against the EN/AS 9100:2016 standard.

All rework activities are carried out by certified EASA part-145 mechanics while most disposal activities are supported by an AFRA certified partner.

Monitoring and management of material flows across all means of transportation and warehousing is guaranteed through an integrated online ordering, cargo management and material management system.

The solution is based on Kuehne + Nagel's global aerospace network, its state-of-the-art IT infrastructure ensuring connectivity and visibility, competence centers with 24/7 support and, its AOG Desk structure.
